THE WORKS PROGRAM DELIVERS ECONOMIC OUTCOMES THROUGH:

- ▶ work experience, employment and educational activities with industry embedded in Renewal SA-managed contracts
- ▶ engagement, training and employment programs in partnership with industry, community groups and registered training organisations
- ▶ building capacity in organisations and communities.

BELTRAME CIVIL FOSTERING FUTURE CAREERS IN CIVIL

Beltrame Civil fulfilled their economic development commitments within the contract for the Tonsley MAB Circuit extension through delivery of two educational activities to 21 students from Cardijn College and Mitcham Girls High School. These tours provided students with insights into the civil construction industry, job roles and career opportunities, sparking interest and potential career pathways for the future.

FIVE YEARS OF STEM WORKS AT TONSLEY TOURS

2024 marked the end of five years of STEM Works tours at Tonsley Innovation District. During this time more than 100 tours for nearly 3,000 visitors, including students and professionals were delivered.

90 tours were attended by schools, providing 2,750 students with the opportunity to explore and discover the STEM careers of the future. These students came from all corners of South Australia, ranging from Mount Gambier on the Victorian border, Kangaroo Island off the mainland, to Cowell on the Eyre Peninsula. Key to the success of the tours was the support and active participation of Tonsley tenants, in particular Micro-X, the Global Centre for Modern Ageing, ZEISS, BAE Systems and Flinders University.
